

Week 5 — Task 2: Ship the Ugly One

Name: Sibgha Mursaleen

Date: 31/07/2026

Live URL: <https://sibghamursaleen.vercel.app/>

GitHub Repository: <https://github.com/SibghaMursaleen/MyPortfolio>

One Real Person's Reaction:

I sent the link to Muhammad Usman/AI/ML Engineer, and my classmate. He checked out the portfolio and verified that all sections (Home, About, Projects, Skills, Contact) scroll cleanly on one page. They clicked into the case studies and could inspect the terminal log mockups and codebases. Their main feedback was he liked the technical look but suggested adding real diagrams later.

Honest "Still Ugly" List

Fade-In Transitions: Navigating into a project's detail view triggers a clean fade-in layout change rather than hardware-accelerated slider transitions.

Plain Monospace Code Rendering: Code blocks display inside pre-formatted blocks with custom CSS rather than using a highlighting engine (like Prism.js/Highlight.js).

CSS-Based Mock-ups: Visual sections display interactive HTML/CSS mock-ups (Swagger interface, Terminal logs, n8n JSON nodes) rather than real product screenshot images.
