

Week 6 — Survive the Crit

Name: Sibgha Mursaleen

Date: 16/08/2026

1. Portfolio Submitted for Review

Portfolio: <https://sibghamursaleen.vercel.app/>

Proof statement:

My portfolio is designed to demonstrate my ability to build backend and AI engineering systems through practical projects, rather than only academic work.

I submitted my live portfolio to a reviewer and asked:

- **In 10 seconds, what do you think I do?**
- **Would you believe I'm good at it?**

2. Reviewer's Feedback

10-second impression

The reviewer identified me as a **Backend/AI Engineer** who builds APIs, database systems, and AI-related automation. They said the hero and About sections communicated this clearly and quickly.

Would they believe I'm good at it?

Mostly yes.

The reviewer said the portfolio provides good evidence of backend ability, particularly through the scraper/RAG corpus builder and Task Manager API. However, they identified a gap between some of my wording and the evidence presented.

Main feedback received

- "Production-ready" was used several times without enough visible evidence.
- The "Machine Learning" label could be misleading because the portfolio primarily demonstrates LLM/RAG and AI integration work.
- The Backend AI Engineering Capstone being listed with completed projects could weaken the presentation.
- Concrete project metrics would improve credibility.
- The hero diagram is visually appealing but does not directly demonstrate one of my actual systems.
- Career Goals could focus more on current capabilities.

- The reviewer initially questioned GitHub visibility, but the project detail pages already contain GitHub source links.

3. Feedback Sorting

Must-Fix

Feedback	Why it matters	Action
"Production-ready" claim	Strong claim without enough visible proof	Fixed
"Machine Learning" label	Does not accurately represent the strongest evidence in my portfolio	Fixed
In-progress capstone mixed with completed projects	Could make the completed-project evidence less clear	Fixed

Nice-to-Have

Feedback	Decision
Add more project metrics	Future improvement
Redesign/remove hero diagram	Future improvement
Reduce repeated social/contact links	Future improvement
Improve Career Goals wording	Future improvement

Already addressed

The reviewer questioned GitHub visibility. After checking the portfolio, I confirmed that each project leads to a project details page containing **GitHub Source / View Code on GitHub**. Therefore, no change was necessary.

4. Must-Fix #1 — Production-Ready Claim

Before

"A production-ready data gathering program that crawls Wikipedia..."

Problem

The reviewer correctly pointed out that "production-ready" is a strong claim and that the page did not provide enough evidence to support that specific claim.

Change made

I replaced the broad "**production-ready**" wording with a more accurate description of the project as a **backend data-gathering program** that follows crawler rules, respects server resources, and produces structured data for RAG applications.

Live-site evidence

Before: Production-ready claim

After: Backend data-gathering description

The updated wording is visible on the live **Polite Web Scraper & RAG Corpus Builder** project page.

5. Must-Fix #2 — Machine Learning Label

Before

Machine Learning

Problem

The reviewer noted that the portfolio evidence focuses more on:

- LLM integrations
- RAG
- prompt engineering
- AI APIs

rather than traditional machine-learning model development.

Change made

I changed the skill category to:

LLM & RAG Engineering

Live-site evidence

The **Skills** section of the live portfolio now displays **LLM & RAG Engineering** instead of **Machine Learning**.

6. Must-Fix #3 — In-Progress Project

Before

The **Backend AI Engineering Capstone** was displayed alongside completed projects while marked as **In Progress**.

Problem

The reviewer noted that an unfinished project in the main completed-project presentation could weaken the impression of the portfolio's finished work.

Change made

I moved the project into:

Currently Building / In Progress

Live-site evidence

The Backend AI Engineering Capstone is now clearly separated from the completed projects and identified as work in progress.

7. Final Result

After receiving the review, I did not try to implement every suggestion blindly.

I focused on the feedback that directly affected **clarity and credibility**, fixed those issues, and kept lower-priority visual/content improvements as future work.

The reviewer already understood my main role within ten seconds, and the changes now make the portfolio's claims more closely match the evidence provided by my projects.

Checkpoint status: Must-fixes addressed on the live portfolio.
